

COMPANY	NAME	CITY	STATE / COUNTRY	COMMENT
SUPERIOR STRIPING	CHAD JUNG	RAMSEY	MN	"Since we installed the laser we are NO longer using string line or chalk lines. This has greatly reduced the amount of labor and has improved our finished product."
ADVANCED WORKZONE SERVICES	JASON GOAD	MUSCOGEE	OK	"These have done nothing but help our quality and speed up our striping operation. We are very pleased with this product."
DAN SWAYZE	DAN SWAYZE	SCOTCH PLAINS	NJ	"This laser is AWSOME!" Saves 50% labor for restripe jobs. Striped 1000 lines in 4 hours!"
MARATHON SOLUTIONS GROUP, LLC	MARK ESTRADA	HOUSTON	TX	"My company recently purchased the GL1000 after seeing the demo over at NPE. It looked like a cool product, so we took the chance. And oh man, it has exceeded our expectations. Not only did our productivity increase, but the overall quality of the finished product has been flawless. The GL has made us look at Striping in a whole new way. From New layouts to Re-Stripes it has a use. It also has become an effective learning tool for our new guys...Not to mention, it's really cool when you get customers or other Stripers stop in their tracks just to check out your awesome laser!" "I could go on and on about this product."
LINES PLUS	DAVID HUNTER	THORNLANDS, QLD	AUSTRALIA	"We love our GL1000! It saves time, improves accuracy, and is a quality unit. The new adjustable mounting system is a great upgrade, and makes fine adjustment a breeze.I can't speak highly enough of after sales support and advice! Great product, solid company behind it."
WARE-EVER PAVEMENT MAINTENANCE CO.	DENNIS WARE	TIGARD	OR	"The GL 1000 is the real deal! If you are a one person operation, the GL1000 will make those new layouts something to look forward to instead of dreading. No more dragging around weighted buckets to hold the other end of your chalk strings. You can now be as efficient as any traditional multi-person operation. For the larger companies, the GL1000 will definitely save you money and time."

PAUL CARTWRIGHT CONSTRUCTION INC.	PAUL CARTWRIGHT	ARCADIA	FL	<p>"I purchased the GL1000 several months ago and was having problems with getting it aligned. I called LaserLine and they promptly sent out a new mount for the unit making the initial alignment much easier. A lot can be said for a company that immediately takes care of its problems and they were there to insure that I was happy with the product.</p> <p>As far as the product itself, I do a lot of airport work where long lines are required and the GL 1000 with the shadow box eliminates pulling strings. Being in Florida with our bright skies, the shadow box is still able to produce the laser line. Great product that not only improves your lines but also speeds your production up."</p>
M&M ASPHALT MAINTENANCE	FRANK J. MELE JR.	WINDBER	PA	<p>"All I can say is, wow. It's refreshing to use and own a quality product that actually does what it's supposed to. I only used it for about 5 hours, but I cannot imagine <i>not</i> having it from this point forward. Been painting lines for a long time and yesterday I painted some of the straightest lines I ever have (with tremendous ease). I was also able to correct a 300-car parking lot full of crooked and misaligned parking rows. We then worked into the evening/night and I was able to use the laser on the ground which was neat."</p>
HIGHWAY GRAPHICS LLC	JEREMIAH CHAMBERLAIN	WEST MONROE	LA	<p>After seeing the display at the 2016 Attssa Show our company decided to purchase the GL1000 with GL 1700 Assist Laser System for our Trantex Thermoplastic Handliner Model 360m. Since installing the system on both of our machines our layout time has been cut drastically and our lines are straighter than ever with little effort in training. The Traditional Pointer Bar requires constant adjusting for varying Extrusion Die Sizes. With the GL1700 System we are able to simply move the laser guidance on the fly. The biggest difference we enjoyed was the lack of a Bar for employees to kick out of alignment, Without a Bar to line up training has become easier as the trainer sees the guide in the same spot as the Operator without Height and angle playing any part in the equation. I have since upgraded both my Marker setting Truck and Grinders with the system to increase productivity and decrease mistakes in alignment. We are now purchasing the system to mount on all hand operated equipment.</p>

<p>JEBCO</p>	<p>PAUL JEBBETT</p>	<p>CORTLAND</p>	<p>NY</p>	<p>Last year I had read about the GL1000 Laser in one of the striping magazines and decided to purchase one.</p> <p>Before I purchased the GL1000 I would use a string with a weight on one end to run from point A to point B and stripe alongside of the string. The weight I used was only about 4 lbs. and when I would align the opposite end and pull too hard I would pull the weight off its mark and would have to walk back and reposition.</p> <p>This year I purchased a new Graco LineLazer V 3900 with Auto Layout along with the GL1700 Pointer Laser for your start and stops. I took the GL1000 off my old striper and installed it on this new machine and it is working very well.</p> <p>Both lasers are quality built and save me many steps. This new method has increased my productivity by at least 30%.</p>
<p>ALL STRIPE & POWERWASH</p>	<p>LONDON ESQUIVEL</p>	<p>GRAPEVINE</p>	<p>TX</p>	<p>"The GI1000 Laser is ideal for a Professional Parking Lot Striper seeking to reduce fatigue and labor costs from large lay out jobs. The GI1000 increases productivity, profitability, and quality. It is a great tool to train your crew and easy to install and calibrate. I have used it all over DFW and highly recommend it to a Professional Parking Lot Striper."</p>

<p>ANOTHER PETERS PAINTING</p>	<p>MIKE PETERS</p>	<p>BOZEMAN</p>	<p>MT</p>	<p>Mike, Last spring I saw the online video of your GL-1000. I've been striping parking lots in Montana for about 20 years. I have 6 striperes and 3 riders. I stripe around 150-200 lots a summer from malls to small office buildings. I recently purchased the new Graco Line Laser V and I wanted to try your laser attachment. After a little trial and error, I started getting the hang of making sure I was shooting a long straight line.</p> <p>Since I started striping, my wife has always helped me with layout, chalking, and traffic control. After 20 years she is starting to make noises like: "I don't want to do this much longer." So as we continued to use the GL-1000 throughout the summer, we found more and more advantages to using the laser vs regular chalk layout.</p> <p>We still had to measure stall dimensions, but often times it was much quicker to just use the laser instead of chalk. One of the biggest advantages was striping on windy days. Pulling a 40' chalk line in the wind is almost impossible to get a line without a curve. Wind does not bend a laser beam of light. If our target was accurate, we could put down a perfectly straight 300' line in the wind. Also we were able to align the end marks by just shooting the laser across the start stripe and the last end stripe, and then marking the ends in between. Lastly, we are able to align up to 4-5 rows of parking in large lots with very little noticeable deviation on line of sight.</p> <p>Bottom line, much more often I was able to work on a lot without help since I didn't need to chalk lines. Wind is not near as difficult to work in, and <i>I think it cuts our time on each lot by 30-50%</i>. I think it can easily pay for itself in time saved and greater profitability over the course of just one summer. If you don't have many lots to work on, it might take a little longer, but it is fun to use, and worth a longer investment. One more thought! People can't help coming over to see your laser in action, and it creates a 'WOW' factor that is good advertising for your business! <i>Thanks for a great product!</i></p>
<p>PRO SEAL ASPHALT MAINTENANCE INC.</p>	<p>JOHN STANLEY</p>	<p>PALMYRA</p>	<p>PA</p>	<p>I would like to give a review on the laser line GL1000 that I bought and used. I was amazed after I got it all lined up. <i>It's a gold mine for my company!!!</i></p>
<p>A-LINE STRIPING & SWEEPING</p>	<p>CHAZ TORRES</p>	<p>WATERLOO</p>	<p>IA</p>	<p>I love this thing. All the time we used to waste and man power. We always took our time to make sure our work was perfect, having the lasers just makes it that much easier and yeah we always had to look down at a string line so looking up isn't all that different. <i>It's a game changer.</i> We have one laser, we are purchasing another one once work picks up</p>

McCONNELL PAINTING CORP.	MARC McCONNELL	SHREVEPORT	LA	Bought the GL1000 Guidance Laser for a 10,000 stall parking lot and it increased our productivity 50% if not more. We striped 400-500 foot lines with ease and they have never been straighter! Much straighter and faster than chalking. This Laser is Amazing!
PRO LINES	DEREK BENSON	EAST BETHEL	MN	The GL1000 is an absolute must if you wanna have the best lines in the game. Not only is their product exactly as advertised, but the owner and staff are some of the nicest folks I have dealt with. This laser has made me the go to guy for many paving contractors around Minnesota because my lines are laser straight, all thanks to Mike's fantastic product. Thanks again guys!!!
SUPERIOR LINE STRIPING	AJ CELLA	MORGAN TOWN	PA	I am absolutely thrilled with the GL1000. I bought a new LineLazer V and the GL1000 at a trade show this spring. With out a doubt it is the best combination out there. Since I no longer have to snap chalk lines, my jobs are much quicker, cleaner and more profitable. The laser has paid for itself several times already this year just in the man hours it has saved. I recently ordered 2 more so I don't have to keep switching the laser over to a different machine every time I paint a different color.
Cross Roads Pavement Markings Inc.	DANNY RAVARY	CORNWALL, ON	CANADA	I got your contact info from the boys at Marathon Solutions. First I want to say I've recently purchased the GL1000 and absolutely love it. It is game changing, I like it so much I just bought a second for my other striper.
A FINE LINE STRIPING SERVICES INC.	WAYNE JOYCE	GREENSBORO	NC	<p>I want to let you know how much we love the GL1000. It has made a major improvement to the consistency and quality of our striping. I was encouraged by comments I had read from other stripers on the GL1000, so I took the chance AND boy am I glad I did! I have always wanted my guys to stripe straight lines. I am really picky on this. I know that since we started using the GL1000, no one puts paint down any straighter than we do. We use it on all our striping projects. Hate to think we had a job where we couldn't use it. Plus, whenever I have any questions, you and your service team have been so good to help me out. I could go on and on about how we love the GL1000! It's a great product and just so cool as well.</p> <p>Sincerely, Wayne Joyce A Fine Line Striping Services Inc.</p>

<p>STRIPE A LOT</p>	<p>SIMON WHITE & ROSS PREVETT</p>	<p>RIDGEFIELD</p>	<p>CT</p>	<p>The laser that you make is phenomenal. It has cut our layout time down by 50% We can now paint lines at 1000 feet and more without snapping those old fashioned chalk lines. Even 18 feet stalls are a breeze.</p> <p>Best, Simon White. & Ross Prevett. Stripe a lot. Ridgefield. Ct.</p>
<p>RANDAZZO LINE STRIPING & SEALCOATING</p>	<p>DAVE RANDAZZO</p>	<p>LAMBERTVILLE</p>	<p>NJ</p>	<p>A few years ago several of my friends talked about the GL1000 laser and then after seeing a demonstration at one of the NPE Expos, I purchased one. I received the GL1000 laser, installed it and followed the printed directions. Initially, I had trouble calibrating the unit and got frustrated. I ended up putting the laser and the shadow box on the shelf in my shop. The laser sat there for about a year.</p> <p>Recently I had seen a YouTube video on how to calibrate the laser. I thought, I can do that. I had a project coming up where I had to stripe a temporary lot on gravel, I thought this would be the perfect place to give the laser another try. This time the laser worked like a charm.</p> <p>When pairing the GL1000 laser with the auto layout feature from Graco I can see the two items increasing my production and reducing my layout time.</p> <p>Thanks again!</p> <p>Randazzo Line Striping & Sealcoating 118 S Franklin St Lambertville, NJ 08530</p> <p>Check us out online at www.randazzoline.com</p>
<p>Connecticut Pavement Marking</p>	<p>Brandon Noel</p>	<p>Killingworth</p>	<p>CT</p>	<p>Just wanted to drop you all a line thanking you for the striping laser. I've be in business for over 20 years and this product has changed my operation forever. Anyone not adopting this technoligy is throwing away money. Drasticly improved productivity and true laser straight lines. <i>You couldn't pay me to give it back</i> . Thanks</p>

Smith & Sons Seal Coating	Delmer Smith	Englewood	OH	<p>Unbelievable equipment and technology!!! I've been striping for 24 years, and this technology has transformed my business in numerous ways already, and I've only really been using it this year. I anticipate even greater benefits once fully integrated.</p> <p>The laser line folks' support has been phenomenal!! Numerous times Mike has walked me through setup and operational issues that have basically trained me along the way. Mike is very personable and very fair in working within my budget to equip all 5 of my machines. So much so, that I recently purchased another striper and are in the process of getting another complete laser system.</p> <p>It's nice to still experience old-fashioned customer service done the right way!</p> <p>Keep up the good work Mike, and I greatly appreciate your support through our transition phase from the old way to the best way!!!!</p>
Traffic Safety Solutions	Brad Kusko	Nesconset	NY	<p>Since using the GL1000, the quality of workmanship and speed in getting jobs done has increased tremendously. It's a no-brainer to switch from chalk lines and chains to using a laser. The cost pays for itself after a few jobs with decreased labor and speed. Couldn't recommend it enough!</p>
Linex Striping Company	Kris Kuehnert	Canadensis	PA	<p>We just did a layout & stripe at a church 365 spaces. No chalk lines! BAM! Done by lunchtime thanks to the GL1000 Laser.</p>
Brent Powers Striping	Brent Powers	Dawson	MN	<p>Laser line makes work so much faster and accurate! I don't think I could do a job without it! I hope my competition doesn't find out about laser line because I have the ability to bid cheaper and still make more money.</p>
ProSeal Asphalt Maintenance Inc.	John Stanley	Palmyra	PA	<p>I just bought a 5900 series striper with a Laser Kit. This would be my 4th machine and 3rd laser kit! I am so glad I found this because I never stripe without it! I love painting at night. I always say, if you don't have a laser, you're not painting enough! Another great thing about it is that I can paint alone and at my own pace. I have attached a video of my recent job with the laser.</p>
I Do Lines	Chris Flora	Sullivan	MO	<p>I have been striping for 3 years. 3 months ago I decided to order the gl1000 after my dot laser broke. The gl1000 not only helped make a straighter and more accurate line but it helped speed up my production. This was important at the end of the season when I realized I was still 43 jobs deep. I was able to push and finish 7-10 decent size parking lots all within a 150 mile radius. I highly recommend this for new and veteran stripers. This is the easiest product to train new hires on.</p>

A Fine Line Striping Services, Inc	Wayne Joyce	GREENSBORO	NC	I have always wanted our striping guys to stripe the best line possible. Straight, clean and crisp. But that doesn't always happen. Since we purchased the GL 1000 2 years ago, I firmly believe we stripe the straightest line of any competitors in our area. As a striper, you can't help but look at the lines in any parking lot you go to and compare them with the quality of work you perform. The GL 1000 has been the single best investment for the money we have purchased. Once the laser is calibrated, which is fast and easy, you are on your way to striping beautiful straight lines and it is so much easier to train new guys as well. I can't say enough good things about the GL 1000. It's well made. Great battery life and wonderful customer service if ever needed. No matter how good you are, the GL 1000 will make you better!
Nelco Commercial Maintenance Inc.	Kenneth Nelson Vice President of Operations	Mobile	AL	Laserline Mfg., Honestly, I could write several testimonials about our experience with the GL 1000. We purchased our first unit in November of 2017 for a Walmart Distribution Center job. Our old method of painting straight lines consisted of pulling strings and dotting lines. And that worked fine in most cases. But, the challenge we faced with the WDC project was being able to paint a dozen lines over 1000 ft long and keep them straight. I knew we couldn't use our old method so I began researching the internet and I found that the best solution, and the only solution was to purchase a GL 1000. The owner of our company was skeptical at first. He wasn't happy that I made the purchase but I assured him I would pay him back personally if it didn't work. Long story short, One week into the job, he was explaining how it worked to everyone that walked by, as if the entire thing was his idea from the beginning. Everyone at our company loves it. No one will attempt to stripe without it now. Needless to say, we bought a second GL 1000 a couple months after the first one. Thanks for making such a great product.
Contract Paint	Steve Diehl	Bedford	PA	We have been using the GL1000 for 2 years. Best way to paint straight lines without the mess of a chalk line not to mention the time it saves. I mounted a collapsible orange cone on the top of the target for safety and ease of picking it up to move it. The GL1000 is by far the best investment I could have made. Thanks for a top of the line product. Steve

B&D Striping, LLC	Randy Schwake	Inver Grove Hts	MN	<p>Dear Laserline Folks,</p> <p>I purchased my first Laserline GL1000 in 2014 and now own 3 of them and have added 3 GL1700s and have never looked back.</p> <p>I wouldn't stripe without my Laserline lasers because of the efficiency factor and quality. I used to think I needed another body or two on larger layout jobs but can now can handle almost any size job on my own especially at night.</p> <p>I love striping at night (daytime is fine too but I have to move the Alignment Target) with the GL1000. Once I do the layout with my Graco 3900 auto layout I can shoot lines without any help. The paint dots light up like magic when the laser hits them and I am off to the races. People have commented that I look like a spaceship out there with all the lights and green lasers and are impressed with the technology.</p> <p>The more I have used my GL1000s and GL1700s the more creative I have gotten with using them. I align my GL1700 so it rides on the left edge of the line and can make single lines I have to shoot both ways look seamless. This is especially helpful behind pillars in parking garages. Your service has been fantastic from the get-go. Thank you so much for everything!</p>
Advanced Texas Striping	Mark Steinke	Haslet	TX	<p>Great Job Laserline!! I have to say, the GL1000 is a game changer in our industry. My lines, short and long are straighter than they would be without it. I use the laser not only for long straight lines but also to mark my stall ends so they are all equal. This saves me huge amounts of time not popping chalk lines. It's also a handy tool to use when working on restripes. The laser points out where the old lines are not straight, and I use the laser to guide me to spray over the old lines with new straight ones. At night, I can shoot my laser and visually see how my stripe will look over very long distances before I paint. During the day, I use the Alignment targets which work well even on the brightest days. I started out with only one machine having the laser, now I have it on all my machines and will have it on all future machines. You can teach new employees how to paint straight lines in a short period of time and the end result looks better than most guys with years of experience who don't use the laser. This tool makes my job much easier and increases productivity and quality!! Oh and don't forget the Dot Laser which takes the guess work out of where your spray tip is. With this laser you know exactly where your paint is going to be!</p>

Mike Keathley	Mike Keathley	La Vernia	TX	<p>Laserline Mfg; Let's talk about them and their customer service. So I go and order me a complete GL1000 set up including the battery. I also ordered the GL1700... with the battery too. I received a call from them a couple days later. They wanted to know if I was going to run both lasers on ther same machine. I told them yes. They then told me that I didnt need the second battery kit and they would be refunding me the difference in price. Not only that... they were going to throw in another shadow box for me. I know it's not much in the grand scheme of things, but that's pretty effin' baddass customer service if you ask me! There's a lot of dishonesty in this industry. I've struggled with it in the past. I refuse to bash others but I - will- commend others for stepping up and LaserLine Mfg stepped up. It would have been supper easy for them to take my money and never look back. They didn't. Way to go, LaserLine mfg!</p>
